

Sentinel chainmail rope protector 0.5m

MR705

Rope protector 0.5m length. Chainmail construction for high cut resistance.

Features:

- Wrap-around style rope protector with Velcro closure
- Stainless steel for corrosion resistance
- Prussic loop attachment to rope with captive 3mm cord
- Chainmail construction gives high cut resistance

Replaceable covers available to protect paint work or other easily damaged surfaces from chainmail.

NB: Not recommended for use at an angle over an edge

'See through' chainmail construction allows the rope to be viewed without removing the protector.

In tests against a guillotined steel edge the chainmail withstood over 200 passes and was still in good condition. In the same test, canvas was cut through after 2 passes and Kevlar withstood 6 passes before being cut through.

Can also be used to protect ropes, lanyards, cowstails etc. when working with sharp tools or materials.

Dimensions (open) 45 x 16cm.

Supplementary attachment loop allows multiple protectors to be connected together to cover longer lengths.

Optional covers:

MR705C - Clear PVC. Allows sight of the rope inside the Sentinel.
MR705P - Grey TPU. Greater durability.

Both options attach to the Sentinel with Velcro. Once fitted, the Sentinel can be opened and closed as normal.

Patent Pending **GB1600292.5**
